EDUCATION

Georgia Institute of Technology, Atlanta, Georgia
Bachelor of Science in Computational Media

Dec 2026

Relevant Coursework: Data Structures and Algorithm, Objects and Design, Designs and Analysis of Algorithm

SKILLS

Proficient in **Java, Python, C#, GDscript**; Familiar with **HTML, CSS, JavaScript, PHP, C**

Proficient in **Unity, Godot, Figma, Git, VSCode**; Familiar with **Unreal Engine, Blender**

Proficient in **OOP, Game Design, Agile** concepts; Familiar with **Networking, Machine Learning** concepts

EXPERIENCE & PROJECTS

Kart: The Tech Filled Racing Game - Steam Released

Project Co-lead, CTC Studios, Remote

June 2022 - Present

- Designed and implemented multiplayer gameplay systems supporting up to 12 players per lobby using Godot and Steamworks P2P networking.
- Designed and implemented core gameplay system including vehicle physics, collision handling, and ability logic, focusing on emergent gameplay and player readability
- Iterated on UI and HUD systems for lobbies and in-game menus, optimizing usability and accessibility for new players.
- Led iterative design decisions through structured playtesting sessions, analyzing feedback to balance mechanics and resolve edge-case behaviors.
- Authored and maintained the Game Design Document (GDD), aligning design intent across programming, art, and design teams.

Mythical Hunt

Project Lead, Atlanta, GA

June 2021 - Present

- Designed a cooperative multiplayer creature-hunting game inspired by global mythology and folklore.
- Developed AI behavior systems using finite state machines and personality variables (aggressiveness, hesitation, opportunism).
- Designed systemic gameplay mechanics including reputation, karma, and ecosystem-driven creature interactions.
- Authored a comprehensive Game Design Document to align gameplay, AI behavior, and world design.

Co-Founder, TurnOver, Atlanta, GA

Sep 2025 - Present

- Conducted customer-discovery interviews to identify user pain points and core feature requirements.
- Analyzed and visualized interview data to define the primary target demographic and guide early product direction.
- Built and prototyped a web application using React, Express, and Python, emphasizing rapid iteration and usability.
- Designed interactive wireframes in Figma, translating user insights into clear system flows and interface concepts.

WanderSync App

Programmer, CS2340 Coursework Project, Georgia Tech, Atlanta, GA

Aug 2024 - Dec 2024

- Developed a vacation planning app in Java using Android Studio.
- Collaborated in a 4-person team, applying Agile methodology with monthly sprints.
- Maintained a Git codebase to support version control and features integration.
- Integrated Firebase (NoSQL) for real-time data storage and synchronization across devices.

What Yours Is Mime

Programmer, Georgia State PantherDev, Atlanta, GA

Jan 2023 - May 2023

- Developed core gameplay systems in C# using Unity including player movement, abilities, and collision interactions.
- Collaborated in a 8-person team, using Jira to assign and track weekly tasks.
- Maintained Git version control to reduce merge conflicts and keep the codebase stable throughout the 4-month project.
- Conducted regular playtests with playtesters to refine controls, mechanics, and user experience.

LEADERSHIP AND COMMUNITY ENGAGEMENT

GreyHat at Georgia Tech, Georgia Tech

May 2024

- Review case studies of company breaches to understand hacking methods better and strengthen the ability to discover and prevent attacks

VGDev, Georgia Tech

Dec 2023

- Participated in playtesting and bug reporting for game development and provided comprehensive reviews

ADDITIONAL SKILLS AND INTERESTS

Fluent in **English** and **Vietnamese**

Interests: Piano - 5 years, Archery - 1 year, Chess - 3 years
